Access Panel
White Steel

Easy Access
To ceiling spaces and bulk heads

Powder Coated Steel
For corrosion resistance

Easy Installation

MASONS
Designed Smart, Built Tough.
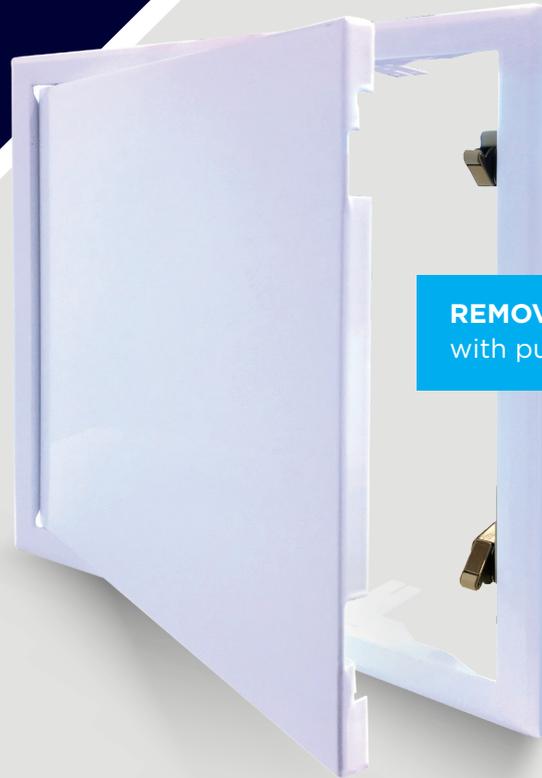

INSTALLATION GUIDE

1. Cut a hole in the plaster board to match panel size adding 2.5mm each side to allow for clearance (eg 205 x 205mm for the 200mm panel).
2. Slot the hatch (without door for easy installation) into the opening.
3. Fold out the steel tie tags, located around the frame, so they are perpendicular to the frame and insert the panel into the opening.
4. Secure the steel tie tags to the stud or support framing.
5. Fix screws through the access panel and tags to the timber frame supports until the framing is securely fixed to the timber frame supports.
6. Insert the door and secure with pin provided.
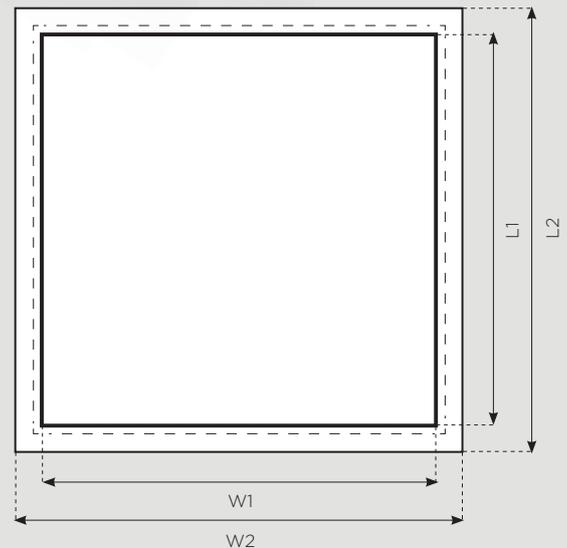

Description	Cut hole size (mm)	Opening size (mm) W1xL1	Overall size (mm) W2xL2	Masons Code
